
Quran AI

The best of you are those who learn the
Qur'an and teach it. (Prophet Mohammed ﷺ)

AI-assisted Quranic devotion

Our app is designed to help individuals improve their Quran recitation using AI technology. The app listens to recitations, detects mistakes and provides real-time feedback for correction, to help users to achieve Quranic perfection.

The Problem

- 600 million Muslims recite Quran everyday
- Only 16% of Muslim population speak native Arabic
- Limited instructor and assistive tooling
- Few engaging experiences
- Lack of local heritage and taste

Value Propositions

Data Network

The more people use it, the better the speech recognition becomes

Educational Tools & Analytics

Providing you with insights on your performance

24/7 Dynamic Feedback

Get feedback on your recitation day and night

Inspired by the golden ages on Islamic inventions

Features

Incorrect Words

Perfect that verse. We closely follow along with your recitation and notify you of incorrect words e.g (مؤمنون) instead of (مسلمون)

Missed Words

Avoid the mix-up. We enforce correct sentence structure and detect when you miss a word or recite the wrong verse.

Mutashabihat

Unsure of what comes next? We present you with similar verses when you make a mistake so you can understand the distinction between the error and correct verses.

User Acquisition Forecast

Market Potential: 5 Million Muslims

Number of Families: 1,000,000 Families

Subscriptions/Family:

1% = 10,000 Subscriptions (satisfactory for the launch time)

2% = 20,000 Subscriptions (expected after 3 months)

4% = 40,000 Subscriptions (our goal in first 6 months)

6% = 60,000 Subscriptions (goal of the first year)

Revenue Projection

Market Value: \$100 Million

Monthly Subscription Fee: \$3 per Family (or maybe a user)

Projected Monthly Revenue According User Acquisition Forecast:

\$30K = Launch Campaign

\$60K = After 3 Months

120K = Goal for the first 6 month

180K = goal for the year after expanding the target market

Important Note

Note: These projections are specifically for Kurdistan region especially during the launch stage, for one month only, and with the expectation of 1%, 2%, 4%, and 6% of families subscribing.

These figures are subject to change based on actual market performance and user adoption.

Scenarios & Expectations

Worst Case Scenario:

- Failure of the project at all: \$ 40-60K loss

Expected Scenario (first six months):

- 10,000 subscribers /month and \$30,000 Revenue/month
- \$22 estimated recurring cost

Exceeding Expectation: (first six months)

- 40.000 subscribers /month and \$120,000 Revenue/month
- \$62 estimated recurring cost

WoW Scenario: (first year)

- 60.000 subscribers /month and \$180,000 Revenue/month
- \$89 estimated recurring cost

Budget & Expenses

Description	Cost / \$
App Development (one time payment)	40K
Test and troubleshooting (one time payment)	5K
Marketing Campaign	30K
Sales/Accounting (recurring fee)	20K/year
Customer Service (recurring Fee)	6K/year
Maintenance, Cloud, host, domain (recurring Fee)	12K/year
continuing marketing campaign using retained earning	

Mobile App and AI Recurring cost

Feature	Option A	Option B	Option C

Mobile App and AI Recurring cost

Feature	Expected Scenario 10k	Exceeding Expectation 40k	WoW Scenario 60k
AWS AI SERVER	\$12K	\$38K	\$56K
AWS hosting and server	\$1800	\$1800	\$1800
App Maintenance	\$3000	\$3000	\$3000
Product Manager	\$50 per hour	\$50 per hour	\$50 per hour

AWS AI SERVER estimated on active customer per 4 hour a month

Appendix

Recurring App Server

AWS servers	Estimation (10k active user , 10k Concurrent)	Roughly estimated yearly
on-demand	\$100 per hour	\$52.5k
Reserved	\$50 per hour	\$27K
Spot	\$10 per hour	\$18K

For first year recommend it to have reserved server

Once we have traffic of one year we can estimated the on-demand budget

Some information to know before deciding :

On-demand: With on-demand pricing, you pay for the resources that you use, and you can scale your server up or down as needed.

Reserved: With reserved pricing, you commit to using a certain amount of resources for a certain amount of time, and you receive a discount on the price of those resources.

Spot: With spot pricing, you can bid on unused AWS resources, and you only pay for the resources that you use. However, there is no guarantee that you will be able to get the resources that you need, and the price of spot resources can fluctuate wildly.
